DETAILED ACTION

Response to Amendment

The amendment filed on January 29, 2007, has been entered and acknowledged by the Examiner.

Claims 1-3 are pending in the instant application.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3 rejected under 35 U.S.C. 102(e) as being anticipated by Tyan et al.
(US 2004/0140757).

Regarding claims 1-3, Tyan discloses an electroluminescent device comprising a substrate (Fig. 4c, 10; Page 6, Paragraph [0064]) and, adjacent to the substrate, a laminated body composed of an anode (Fig. 4c, 12R; Page 6, Paragraph [0067]), an electroluminescent layer directly on the anode (Fig. 4c, 14; Page 6, Paragraph [0067]), a cathode (Fig. 4c, 16a; Page 6, Paragraph [0066]), and $2n+1$ transparent layers, where $n = 0, 1, 2, 3, \dots$, which transparent dielectric layers alternately have a high refractive index of $n > 1.7$ and are made of TiO_2 (Fig. 4c, 18; Page 6, Paragraph [0066]) and a low

Art Unit: 2879

refractive index of $n \leq 1.7$ and are made of SiO_2 (Fig. 4c, 18; Page 6, Paragraph [0066]), and the transparent dielectric layer bordering on the cathode has a high refractive index of $n > 1.7$ (Fig. 4c, 18; Page 6, Paragraph [0066]) whereby reflection of light at the anode is decreased by the transparent dielectric layer and transmission of light through the anode is increased. Note that Tyan discloses that transparent conductive spacer layer 20 may have a thickness of 0, making it optional, and thereby disclosing a device where the electroluminescent layer is directly on the anode (Page 4, Paragraphs [0044]-[0045]).

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the

Art Unit: 2879

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
